

ABSTRACT OF THE DISCLOSURE

The present invention relates to a web page uploading method in which whether or not a web page is suitable for being made public can be
5 checked without imposing a burden on an administrator and a web server. When a client computer in which a software for editing and uploading a web page is installed is instructed to upload the web page (S401), the client computer checks whether or not predetermined bad words are contained in the web page prior to uploading the web page to the web
10 server (S402 to S406). Then, the web page subjected to the checking operation in this manner is uploaded (S409) and the data file representing the result of the checking operation is uploaded (S410), thereby completing the uploading of the web page.
